

## CLAIMS

1. (Currently Amended) A pet house comprising:
- a lower frame;
  - fabric attached to the lower frame to form a pet supporting floor;
  - fastener portions secured to the fabric forming the pet supporting floor;
  - a preshaped substantially rigid and shape retaining upper frame cooperable with the lower frame and removable with respect thereto to define a space above the pet supporting floor;
  - a cover that fits removably over the upper frame to create an enclosure over the pet supporting floor, said cover including fastener portions which mate with the fastener portions secured to the fabric forming the pet supporting floor to secure the cover to the pet house; and
  - an opening in the cover where a pet can enter and leave the pet house.
2. (Original) A pet house according to Claim 1, wherein the lower frame rests on a supporting surface and forms the pet supporting floor spaced above the supporting surface.
3. (Original) A pet house according to Claim 2, where the fabric attached to the lower frame to form the pet supporting floor is air permeable.
4. (Original) A pet house according to Claim 3, wherein the fabric attached to the lower frame to form the air permeable pet supporting floor is a mesh material.
5. (Original) A pet house according to Claim 4 where the mesh material is PVC coated polyester.
6. (Original) A pet house according to Claim 5, wherein the lower frame includes legs.
7. (Original) A pet house according to Claim 6, wherein the lower frame is substantially rectangular and includes four removable legs.
